

Leave slopes as fully simplified fractions where appropriate.

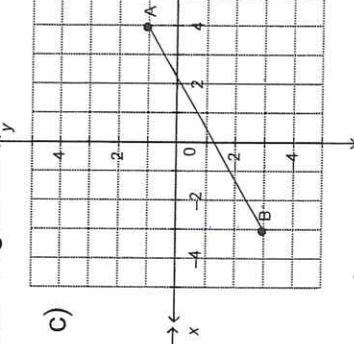

1. Determine the slope of each of the following line segments

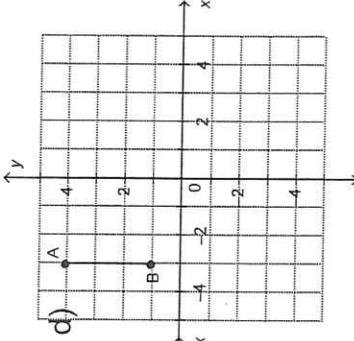

a)  $\frac{-6}{4} = -\frac{3}{2}$

b)  $0$

c)  $\frac{4}{7}$

d) undefined

2. Determine the slope of the line passing through each of the following pairs of points.

a) A(3, 6) and B(7, 10)

a)  $\frac{4}{4} = 1$

b) C(2, -3) and D(-2, 5)

b)  $\frac{8}{-4} = -2$

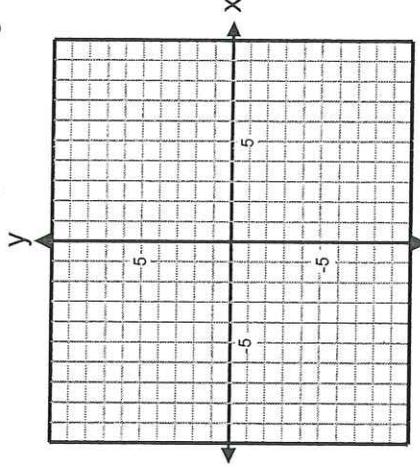

3. Draw and label line segments with each of the following slopes on the grid below.

a)  $\frac{2}{3}$

b)  $-\frac{3}{4}$

c) 2

d) 0

4. The slope of AB is  $-\frac{2}{3}$ . Determine the slope of a line that is

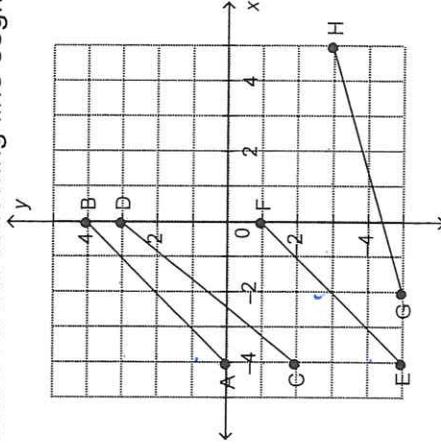

a) parallel to AB.

a)  $-\frac{2}{3}$

b) perpendicular to AB.

b)  $\frac{3}{2}$

5. Which of the following line segments are parallel? What are their slopes?

Parallel: AB and EF

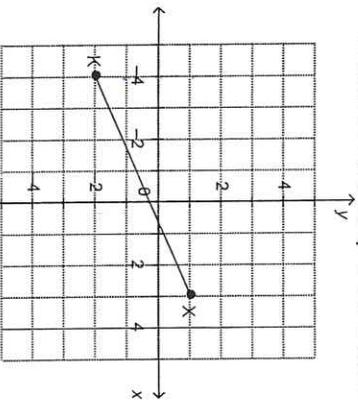

Slopes:  
AB: 1

CD:  $\frac{5}{4}$

EF: 1

GH:  $\frac{2}{7}$

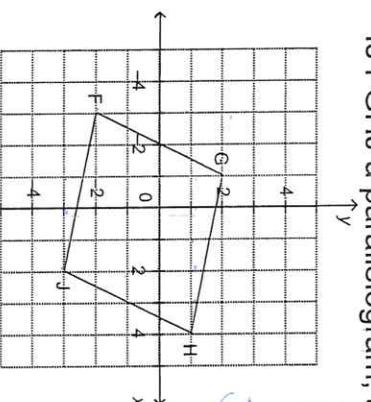

6. What is the slope of a line that is perpendicular to the line segment shown below?

$KX: \frac{3}{7}$

$-\frac{7}{3}$

7. Is FGHIJ a parallelogram, a rectangle, or neither? Explain.

$FG: 2$

$GH: -\frac{1}{5}$

$JH: 2$

$FJ: -\frac{1}{5}$

A parallelogram. Opposite sides are parallel, but not perpendicular.

8. Line segment AB has endpoints A(-4, -1) and B(-1, 5). Line segment CD has endpoints C(1, 1) and D(5, -1). Are AB and CD parallel, perpendicular, or neither? Explain.

$AB: \frac{b}{3} = 2$

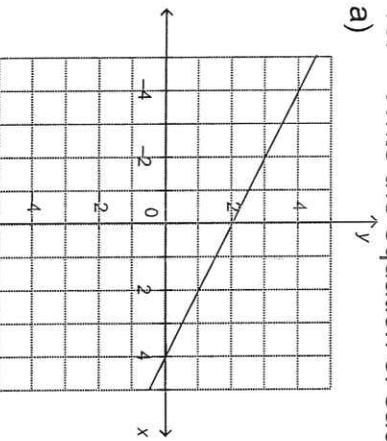

$CD = -\frac{2}{4} = -\frac{1}{2}$

perpendicular - slopes are neg. recip.

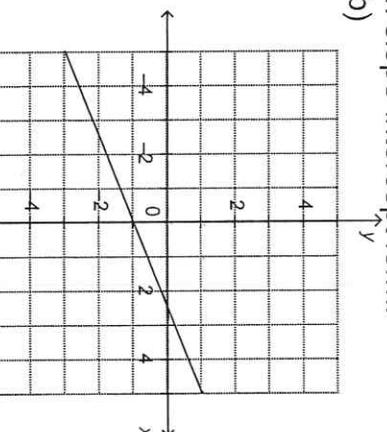

9. Write the equation of a line with a slope of -2 and a y-intercept of 5.

$y = -2x + 5$

10. Write the equation of each of the following lines in slope-intercept form.

a)  $y = -\frac{1}{2}x + 2$

b)  $y = \frac{2}{5}x - 1$

11. Graph and label the following lines on the grid. Label axes and scale.

a)  $y = -4x - 1$

b)  $y = \frac{3}{2}x + 2$
